

General

Sureflo V-Bank Side Access Filter Housings are single stage units designed to accommodate 2 in. deep ASHRAE rated filters in a low pressure drop configuration. They are factory-assembled flanged units suitable for installation in a duct or attached to an air handling unit. As little as 27 in. of in line depth is required with no need for holding frames or fasteners.

Sureflo Housings accommodate nominal 24 in. x 24 in. and 24 in. x 12 in. face size filters of different types and efficiencies up to 50% per ASHRAE Standard 52.1 dust-spot test methods.

Filters are easily serviced through quick-opening access doors. Factory-gasketed tracks and doors assure positive sealing. The efficiency of fully-loaded housings is equal to that of the individual filters.

Sureflo Housings are available in a wide range of sizes up to 8 ft. high and 12 ft. wide. If large units are not practical to install, smaller units are available with modifications to facilitate stacking.

Application

As compared to flat filter housings, the Sureflo V-Bank design effectively doubles the filter face area, thus reducing the face velocity by 50%. Initial filter

pressure drop is reduced and filter life is substantially increased to reduce replacement filter costs and energy usage.

Construction

Housings are constructed of 16 ga. galvanized steel with upstream and downstream outwardly-turned flanges. Units include "Z" channel vertical support members on all four corners. Intermediate support channels are furnished every two feet of width. Filter tracks are extruded aluminum and are gasketed with replaceable polypropylene pile air seals. Housings are equipped with two access doors that are sealed with neoprene gasketing on the perimeter. Doors are equipped with positive-sealing knobs made of UV-resistant plastic with corrosion-resistant brass inserts.

Construction of the top pan allows rainwater to drain off easily so that additional weatherproofing is rarely required.

Options

- Double-walled insulation on doors only or on the entire housing
- Flanges to connect with air handlers
- Aluminum or 304 stainless steel construction
- Available to accept 4" Filters

Important Features

- Units are constructed of durable 16 ga. galvanized steel
- "Z" channel support members reinforce all four corners
- All tracks and doors are fully gasketed
- Holding frames or fasteners are not required
- Static pressure is greatly reduced

Model Number Development

The number at right represents a Sureflo housing 4 angled filters high, and 3-1/2 filters wide. The letter X indicates that special features are required.

Type of housing, which in this case is Sureflow (SF) — **SF** -- **40H** **35W** -- **X**

Height and Width code: The first numeral of each section represents the number of 24"x24" filters high or wide. If a 24"x12" filter is used to complete the height or width, the second numeral of section will be "5".

For special features or sizes, end with the suffix "X" and describe them.

Flanders Precisionaire - Foremost in Air Filtration

Sureflo Features

- A. Notched top flange to prevent rain from collecting on housing top
- B. Corner posts bolted through bearing plates sealed with silicone compound

- A. Neoprene gaskets around periphery of door
- B. Easy-grip knob for positive sealing to door latch
- C. 1-1/2 in. standing duct connection flange front and back
- D. Bolted "Z" channel support posts in each corner

- A. Extruded aluminum filter tracks bolted in place
- B. Replaceable polypropylene air seals
- C. Gasketed door to filter seal

- A. Neoprene gaskets around periphery of door
- B. Easy-grip knob for positive sealing to door latch
- C. 1-1/2 in. standing duct connection flange front and back
- D. Bolted "Z" channel support posts in each corner

(1) Filters/Weight: Top letter/number combination indicates the number of and nominal face size of filters required to fill the unit. "A" stands for nominal 24" x 24" filter. "C" stands for nominal 24" x 12" filter. Bottom number indicates the approximate weight of the housing EMPTY. Add 2 pounds per filter to determine approximate weight of housing when loaded with filters.

- Standard housing depth is 27 inches

Construction Details

1. Standard construction is 16 ga. galvanized steel frame and casing, extruded aluminum filter tracks with replaceable polypropylene pile gaskets, neoprene door gaskets and positive-sealing door latches with easy-grip knobs.
2. System static pressure range for standard housings is from -4.0 in. w.g. to +3.0 in. w.g.
3. Allow 27 in. minimum clearance on one or preferably both sides for filter installations.
4. Intermediate supports furnished every 24 in. of width.

Guide Specifications

1.0 Filter Housings

- 1.1 V-bank side access panel filter housings shall be Sureflo as manufactured by Flanders Precisionaire.
- 1.2 Units shall be a factory-assembled housing with upstream and downstream outwardly-turned flanges for installation in the ductwork or next to an air handling unit.
- 1.3 Housing must be capable of accepting filters without the use of holding frames or fasteners.

2.0 Construction

- 2.1 Housing construction shall be of 16 ga. galvanized steel with "Z" channel vertical support members on all four corners. Metal-to-metal joints shall be sealed with silicone compound.

- 2.2 Filter track shall be extruded aluminum and incorporate a replaceable polypropylene pile gasket to insure sealing of the filters to the track. Filter track shall be suitable for the filters specified elsewhere.
- 2.3 Access doors shall have continuous neoprene gasketing on the perimeter and be equipped with positive-pressure adjustable latches with easy-grip knobs.

3.0 Features

- 3.1 Model numbers and capacities shall be as specified and/or shown on the drawings.
- 3.2 Provide options as specified.
